Subject: Please welcome graduate interns Curtis & David to our team!

Hello team,

We have two graduate school interns joining our team today for a 10 week internship. Please come by and say hello this week!

Curtis Wong just finished his first year at Harvard Business School. Prior to graduate school, he built satellite launch pads while an engineer at Elon Musk's Space Ex.

David Reiff just completed his first year in the joint degree program at Harvard Business School and Harvard Kennedy School. Prior to graduate school, he worked on data analytics and machine learning to launch new financial services products for the Entrepreneurial Finance Lab in Africa, Asia, and South America.

They both will be working on a variety of projects in the innovation space including making it easier to introduce small project innovations in city hall, data visualizations, and applications for emerging technology like drones and blockchain.

Please give them a warm #SJ welcome!

Shireen
